

ABSTRACT OF THE DISCLOSURE

A combination fireplace and entertainment assembly for installation within the outer walls of a home includes a non-vented fireplace on an inside wall and a cabinet encapsulating the fireplace. Additional cabinets and bookcases are releasably secured to the cabinet in a manner best suited to interior room and wall configuration. The fireplace is preferably gas burning or electric heated. The combination is used as an entertainment center featuring a television set and other audio devices which may be blended into the configuration in an attractive and useful manner.
